

Diver

A small, easy to use water level logger to measure groundwater levels with fluctuations of 10 metres and water temperature.

Automatic measurement and registration of groundwater level and temperature

Advantages

- Small and light so can be used in virtually any monitoring well
- Easy to use, can be programmed on site or in the office
- Stores up to 24,000 measurements
- Water level fluctuation of 10 metres
- Built in battery life of 10 years
- Once installed below ground level no part of the logger is visible, therefore reduces the risk of vandalism
- Barometric pressure measurement available using Baro-Diver.

Disadvantages

- Only available to rent

Accessories

- Logger Data Manager (LDM) software/Diver Office
- Dyneema - very low stretch suspension cable

Specifications

- 90mm length
- 22mm diameter
- Measures groundwater level and temperature
- Memory capacity 24,000 measurements
- Stainless steel housing.
