

Arable Land Augers

Arable Land Augers to take samples from arable land for chemical analysis for fertiliser requirements.

Quick and easy analysis of arable land for better yields and higher quality

Advantages

- Slim auger bodies for ease of insertion
- Suitable for medium to harder soils
- For sampling top layers and suitable for most sampling jobs
- Perfect for chemical sampling in the root zone
- Made from non toxic steel
- Available in sampling lengths of 25cm and 60cm
- Sampler is graduated in 5cm increments.

Disadvantages

- Not suitable for sludges and sediment.

Alternatives

There are many different augers capable of sampling different soil types and consistences. If you need to sample softer sediments or sludges we would recommend a Multi Sampler or Beeker Sampler, for sampling in Peat a Russian Corer may be preferred. All augers and samplers from Van Walt are unpainted and untreated so are therefore suitable for environmental research.
