

FACT SHEET

Ergonomic Auger Set

The ergonomic hand auger set is used to carry out manual drilling and sampling in a great variety of different soils in an ergonomically sound way. It can help prevent back, neck and shoulder problems which can be associated with repetitive augering.

For regular manual drilling and sampling of different soil types

Advantages

- Adjustable height settings
- Ratchet system enables easier augering and ensures good posture
- Quicker, simpler and physically less exerting
- Universal bayonet connection
- An Auger head for most soil types
- Strong and easy to clean.

Disadvantages

- Relatively expensive handle requires special augers
- Slightly more maintenance than standard augers.

Accessories

- Compatible with Bayonet Fitting parts
- Carry bag and cases for handle and other parts.

Alternatives

If you are not augering often a standard auger set may be a more cost effective alternative. For larger jobs a window sampling set would be an advisable alternative.
