

FACT SHEET

Oil Detection Pan

Fast onsite analysis of soil and groundwater for floating contaminants.

Semi-quantative field determination of the content of mineral oil in soil samples

Advantages

- Fast and simple to use, ideal during first soil analysis
- Shows oil in soil directly in the field
- Can detect oil down to lowest level
- Can separate soil types during remediating
- Rapid determination of the extent of a contamination in the field can lead to better sampling for laboratory analysis and reduce costs.

Specifications

- Includes anti-reflection plate.
