

## Passive Skimmers

The **Passive Skimmer** is a passive down-well product recovery system for wells 2" or larger.

### Recovery of hydrocarbon layers from wells

#### Features

- Passive system uses gravity to fill skimmer reservoir
- Does not require any power or air source to operate
- Fast Fill time - as quick as 15 minutes with ample product
- Quick set-up.

#### Disadvantages

- Needs emptying manually once full
- Large capacity reservoirs require deep well space.

#### Accessories

- 7.5m Safety cable provided.

#### Specifications

- 42mm diameter
- Stainless Steel and engineered plastic construction.

#### Alternatives

For recovery of both product and water a Total Fluids Pump "Reclaimer" or "Auto Reclaimer" would be suitable. For larger product only recovery an active skimmer system can be used.
