

FACT SHEET

Penetrometer for Top Layers

A hand held penetrometer for the determination of the penetration resistance of top layers

Determines the resistance of top layers and for horizontal measurement of profile pit walls.

Advantages

- Small cones allow for shallow measurements
- Clear readout
- Durable construction
- Factory calibrated exchangeable springs.

Accessories

- Supplied as a complete set including measuring device, extension rods, various cones, compression springs and tools.

Specifications

- Measuring range 6 MPa
- Measurement depth 10cm.
