

Liquid Layer Sampler

Liquid Layer Sampler an easy to use sampler to capture a product/water interface.

Visual presentation of floating product layer

Advantages

- Easy to use
- Presents a product/water interface visually
- Measures the thickness of a floating layer
- Can be used to sample drums, tanks on lorries and gully holes
- Depth specific samples can be taken.
- Constructed of stainless steel & Teflon for easy cleaning and decontamination
- Can be cable or rod operated.

Disadvantages

- Can not be used in thick, viscous fluids.

Accessories

- Additional Teflon sample tubes.

Specifications

- For wells exceeding 38mm.

Alternatives

Multisampler, Beaker Sampler or Bailers.
