

FACT SHEET

Root Auger Set

An auger set for obtaining virtually undisturbed, uniform soil samples for root system analysis to a depth of 2 meters.

Undisturbed samples to determine the depth and density of root systems

Advantages

- Minimal ground disturbance
- Undisturbed soil sample retrieval
- Can be hammered so is suitable for all soil types
- Strong, robust construction
- Equal samples in relation to surface and contents to allow for accurate comparisons.

Specifications

- Sample depth 200cm
- Sample volume 740ml
- Sample diameter 80mm
- Sample length 150mm.
