CONNECT with Van Walt

vanwaltCONNECT

A versatile, accurate telemetry system which allows data from deployed sensors like the PT2X and LevelSCOUT to be accessed from your desktop and shared between users who have permission.

Developed in-house by the Van Walt team and deployed throughout the world with systems in the UK, New Zealand, Africa and Europe.

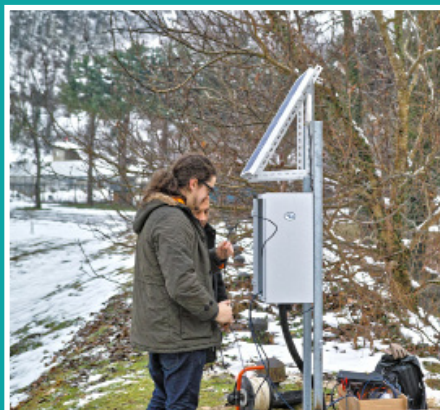

A unique, responsive interface that is intuitive, easy to use and can be quickly learnt to give you remote control of the system and sensors; access to download your data; reporting; setting of alarms against chosen parameters; robust data security and permissions – your data, your way.

vanwaltCONNECT Installations

Cardrona Ski Resort, New Zealand. Making sure there is enough snow to support a successful ski resort while maintaining the environmental status quo by not over-extracting water.

Water Authority, Turkey. To collect water level and turbidity data from a distribution facility and set alarms in the event of falling levels.

Save the Children, Somalia. To monitor river levels and provide alarms to warn the charity in the event of life-threatening floods.
