Downloading data from the YSI ProDSS

To make it easier to access your data from the YSI ProDSS you can use a usb adapter. Please follow these steps to download your data from a YSI ProDSS:

1. Plug a usb drive into the small usb adaptor lead included in your rental or purchase YSI ProDSS instrument

2. Press 'File' button

3. Go to 'Back up data'

4. Enter the time frame of the file required

5. Go to the top and click 'Back up data'

6. A .csv document should now be created on the drive that you can easily open in excel.

To recover your data YSI ProDSS software is not required using the above method but for greater functionality YSI's Kor DSS software has many other useful features.
