

Renting DIVER

Van Walt offer DIVER Level Loggers to rent

With increasing numbers of environmental consultants opting to rent their equipment on a project by project basis, Van Walt Ltd, has introduced DIVER water level loggers to their equipment rental fleet.

This robust, intelligent and compact datalogger provides automatic, accurate and reliable measurements for the monitoring of groundwater levels and water temperature. Just 90mm long with a diameter of 22mm and storing up to 24,000 measurements, DIVER can be used in virtually any monitoring well.

“DIVER is a well used and well recognised brand in the environment, agriculture and education sectors,” explains Vincent van Walt, director Van Walt Ltd. “So what is unique about this announcement is that consultants, instead of having to buy this equipment which may then sit on a shelf for 90% of the year, can now rent a datalogger on an ‘as and when you need it basis’, at very competitive rates.”

For more information on rental prices, equipment rental bundles and favourable longer term rental options on DIVER and a range of other environmental items, call Van Walt on 01428 661 660 or email sales@vanwalt.com .

Van Walt Ltd is a specialist supplier of soil and groundwater monitoring equipment to the environmental, educational and agricultural research communities.
