

Oil Interface Meter

The Oil Interface Meter uses a 16mm probe to detect hydrocarbons as thin as 1.52 mm in wells as small as 19mm in diameter.

Measuring oil and water levels in monitoring wells

Features

- Available in 30m and 60m lengths
- Audible and visible alarms activated on reel when probe contacts product and water
- Highly accurate Kynar® coated steel tape
- Fully field replaceable probe is only 16mm in diameter
- Water resistant padded carrying case to protect instrument
- Auto shut-off circuit to extend battery life

Accessories

- 12050060 Leader guard - protects tape from sharp well edges.
