

Footvalve Pumps

Footvalve Pumps are an economical, manual pump for environmental analysis available in diameters from 9mm to 22mm.

A simple and inexpensive groundwater research pump for well development and purging

Advantages

- Economical
- Will fit into a small well
- Low risk of cross contamination as sample is not in contact with air
- Stainless steel valve can be easily decontaminated
- Light weight
- Easy to install
- Can be used in wells with shaft type covers as well as from street type well covers.

Disadvantages

- Manually operated.

Accessories

- PE tubing
- Tripod with lever.

Specifications

- 7 litres per minute
- Valves available in 9mm to 22mm
- Head lift of 50 metres.
