

## Penetrograph

The **Penetrograph** is an instrument for the determination of the penetration resistance of the ground

**Ideal for measuring disturbed layers and the effectiveness of compaction on different soils.**

### Advantages

- Self recording of continuous measurements plotted on a chart
- Clearly shows disturbed layers
- Will proof compaction situation
- Weather proof charts
- One-push measurement
- Ideal for contractors and agronomists
- Weather proof body.

### Disadvantages

- Withdrawn from the ground by hand.

### Accessories

- Supplied as a complete set, including spare parts and aluminium carrying case.

### Specifications

- Made of stainless steel
- Records each layer of the ground profile up to 0.80 m on the chart
- Measuring range is up to 5000 kN/m<sup>2</sup> (=5 MPa)
- Suitable to depths up to 0.80 m.
