

Stepwise Sampling Set

Stepwise Sampling Set is a set for the determination of mineral nitrogens with no cross contamination among the samples.

Quick and virtually undisturbed sampling of mineral nitrogens

Advantages

- Made from non toxic high tensile strength steel
- Three augers with different diameters
- No cross-contamination of samples
- Easy to use as auger can be pushed or hammered into the soil.

Disadvantages

- Not suitable for sludges and sediment.

Alternatives

There are many different augers capable of sampling different soil types and consistences. If you need to sample softer sediments or sludges we would recommend a Multi Sampler or Beaker Sampler, for sampling in Peat a Russian Corer may be preferred. All augers and samplers from Van Walt are unpainted and untreated so are therefore suitable for environmental research.
