

Vrijwit Auger

Vrijwit Auger a perfect auger for taking samples from shallow water bottoms with roots.

Undisturbed sediment samples

Advantages

- Suitable for taking samples from sediment containing undecayed material and roots
- Stainless Steel construction for use in all soil types
- Takes precise rectangular samples for clear analysis
- Pushed vertically into the soil using extension rods.
- Shape and core catcher prevents sample loss
- Quick and efficient identification of the stratification and composition of the soil.

Specifications

- Maximum sample depth: 3 m
- Sample volume: 1.4 l
- Sample type: loose
- Sediment type: soft
- Profile description: top layer.

Alternatives

For sampling in very soft soils to deeper levels a Peat/Russian corer would be suitable.
