Flow

NivuFlow Stick

A portable device that measures flow in rivers, streams and flow-gauging structures.

Measures depth using a high-accuracy pressure sensor and measures velocity with an ultrasonic sensor.

Communicates via internal Wi-Fi. Easily connects to either the device provided or your own smartphone via the web browser.

Maximum operating depth is 1m and maximum velocity is 6m/s.

Included in the NZ NEMS document for Open Channel Flow, Version 2.0.0, released in October 2026.

Compatible with the open-source software QREV - used to process, review and calculate streamflow data.

Full training is provided, along with equipment and detailed instructions.

Servicing and Repairs

We can inspect, service and repair your environmental equipment in our dedicated repairs workshop.
All equipment is returned to Van Walt, 21A Gordon Road, Wanaka, for an initial inspection.
We have a form to be included with the items, which can be found on our website (www.vanwalt.com/servicing-and-repairs/)
Alternatively, please include a note identifying who owns the equipment, a description of any issues and other relevant information.

On arrival, we inwards test to identify the device's condition.
If no repairs are needed:
We will clean, calibrate and return items with a detailed report.
If repairs are identified:
A detailed report will be sent, which will include a quote for repairs and parts.
If the quote is accepted, we will perform repairs, clean, calibrate and send an updated report before sending the equipment back.
