Total Fluid Pumps

A new completely self-contained pneumatic pump from Van Walt Ltd

Van Walt Ltd, the specialist soil and groundwater monitoring equipment supplier, has added the Total Fluid Pump – Auto Reclaimer to its rental fleet. As a completely self-contained pneumatic pump that operates on compressed air and independently of a controller, it is intrinsically safe, so is ideal for purging and developing deep wells in aggressive environments such as landfills and mines.

Constructed entirely of stainless steel and available in two sizes (89mm or 42mm) the pump will move both product and water from depths of up to 150m or more. “Because it’s so easy to set up and operate, it’s real ‘out of box’ performance and fits nicely into our rental fleet,” said Tom Stone, Rental Sales & Technical Support Manager. “Although it is not suitable for sampling this pump is ideal for pumping product and water in contaminated wells”.
