

CIWEM Accreditation

Environmental Training Course Gains CIWEM Accreditation

Van Walt Ltd, the specialist provider of environmental monitoring equipment and training, is delighted to announce that it's 'Practical Fieldwork Theory & Techniques Training Course' has received the approval of The Chartered Institution of Water and Environmental Management – CIWEM.

“This is excellent news for us,” said Vincent van Walt, director. “We have been training professionals for more than seven years and over 200 delegates have been through our environmental monitoring courses. Since we developed this type of training we have always tried to ensure the content of our courses, which is constantly being updated, was relevant to an environmental researcher’s continuous professional development and, on completion, gave them the necessary skills to work effectively in the field.”

The course, which comprises of 12 modules, including Environmental Standards and Reporting; Soil Classification and Geohydrology; Soil, Sludge and Sediment Sampling; Conceptual Site Modelling and the Remediation of Contaminated Sites, usually takes place at Van Walt’s premises in Haslemere, Surrey, over a three day period. Dates for future courses are available from <http://www.vanwalt.com/training-auger-groundwater-environmental.htm> .

“We are delighted CIWEM has accredited this course. Over the years we have finely honed the content to combine classroom theory with realistic practical exercises in onsite conditions, so every delegate leaves with the confidence and skills of knowing exactly what they are monitoring and they can be sure of collecting accurate results, first time, every time,” concluded Vincent.
